

# KUEBIX TMS

## Top Five Reasons to Upgrade to **Kuebix Business Pro**

**1** Collaborate across **multiple locations and users** to gain even better control of your logistics operation.

**2** Generate actionable analytics, **reports** and dashboards that provide visibility to every detail of your freight spend and ensure you're making the most strategic shipping decisions.

**3** Automate the shipment creation process with the addition of **Order Integration**. With integration, POs flow directly from an ERP system. This facilitates the rapid creation of shipments by avoiding the need to re-key a long list of order line items, ensuring 100% order accuracy.

**4** **Manage claims** more effectively with Kuebix's Track Claims feature, reducing time and cost in the process.

**5** Automate the **freight pay and audit** function to reduce the cost to audit invoices and the time handling exceptions.
