

KUEBIX ERP INTEGRATION with Sage 100

Integrations between **Kuebix TMS** and **Sage 100** allow shippers to manage freight easily and efficiently. Order information is automatically populated within Kuebix so that rating, booking, tracking and other logistics functions can be completed without wasted time and with complete accuracy.

This integration allows users to **achieve 100% shipment accuracy** by avoiding manual entry. With this integration, data is transferred via web services so that teams are able to access the information they need when they need it.

Shippers who leverage a Sage 100 integration eliminate the need to shift between systems for freight management. Instead, they **consolidate logistics processes** into a single system. This reduces order processing time and allows teams to dedicate more time to value-add tasks.

Kuebix also provides users with access to **actionable analytics**, like SKU level freight costs, so that they can make the best strategic shipping decision to improve their business.

sage 100

BENEFITS OF INTEGRATING

- Streamlined processes
- Reduced human error
- Improved visibility to all orders
- **Rapid ROI** and cost-avoidance

How Does the Integration Work?

During an integration process, Kuebix's interface is added to Sage 100 as an improved API layer. This means that important shipment data can be stored within Sage 100. When changes or new orders are made within the ERP, those pieces of information are automatically reflected within the shipper's Kuebix TMS account.

THE KUEBIX ADVANTAGE

- A true cloud-to-cloud technology
- Easy to use and quick to implement
- Competitive, fair pricing
- Customer centric approach
